What is RMS?

Rental Management System: is a system for monitoring and tracking rental car fleets for individuals and companies with the goal of preserving assets, improving efficiency and creating a more sustainable business operation.

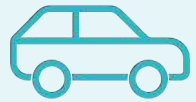

Saferoad offers a diverse range of RMS solutions that are catered to the needs of rental companies.

The text 'RMS' is displayed in a large, bold, teal font. It is centered within a white, trapezoidal shape that is semi-transparent, allowing the background image of a city skyline at night to be visible through it. The city lights and buildings are reflected in the water in the foreground.

RMS

RMS Benefits

Our Rental Management System solution is designed to increase the efficiency of rental fleets and optimize usage. RMS gives you the ability to:

Asset Tracking: Full visibility for assets with ability to locate any car location at any time, monitor usage hours and review route history

Geo-Fence: Determine the geographical boundaries through geo-fencing, setup dangerous zones and receive alerts

Live-streaming: Real-time vehicle location with 2-3 second delay only

Mileage Accuracy: Know the exact distance a car has covered with 98% accuracy

RMS Benefits – Cont.

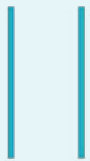

Our Rental Management System solution is designed to increase the efficiency of rental fleets and optimize usage. RMS gives you the ability to:

Reporting and analysis: helping you make data driven decisions to better manage your fleet with advanced metrics and analysis of fleet efficiency, waste and driver behavior

Driving Behavior Monitoring: advanced metrics for monitoring and improving driving behavior with the goals of reducing cost and improving road safety

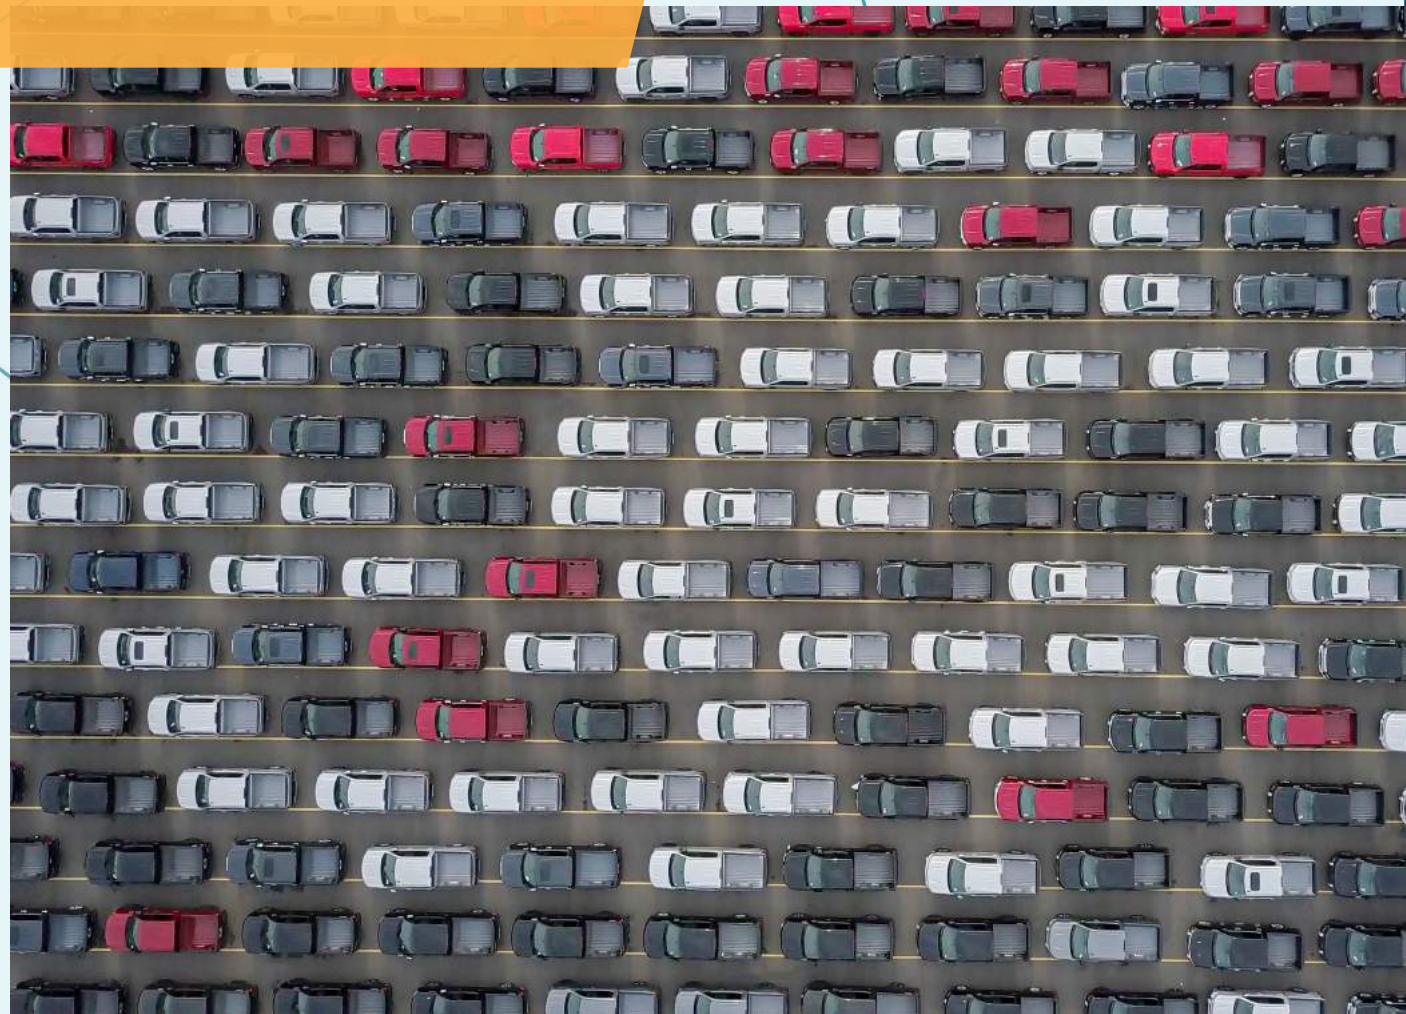

Vehicle Control: remote engine shutdown

Receive alerts for misuse, device tampering or reckless driving
